Technical Description Hydraulic Crawler Crane	18
Transport Example for HC 110	19

Features:

- ▶ 110 tons (100 mt) maximum lifting capacity
- ▶ 230 ft (70 m) maximum length of main boom
- ▶ 200 ft + 70 ft (61 m + 21 m) maximum boom and jib
- ▶ Power up / down and freefall on main and auxiliary drums
- ▶ Quiet, comfortable operator's cab with excellent viewing range
- ▶ Hydraulic counterweight removal system simplifies installation and removal
- ▶ Superior transportability – 11 ft (3.35 m) width; 11 ft 3 inch (3.43 m) height
- ▶ 105,000 lb (47 627 kg) transport weight includes sideframes, 3rd drum and boom inner

* see page 10 „Notes to lifting capacity“

Warning

This rating chart is invalid if the crane has been modified or altered by use of other than GENUINE AMERICAN PARTS as such modifications or alterations may affect its capacity or safe operation. See American Crane Corporation Service Bulletin #259.

Ratings in this chart are in POUNDS and do not exceed the percentage of tipping specified for this crane by ANSI B30.5. All ratings require that the crane be standing level on a firm uniformly supporting surface.

Do not lift loads in excess of those shown on this chart. Lifting loads in excess of those shown or operation not in accordance with good operating practice, including limitations shown on page 3499 of Operator's Manual, can cause tipping, structural damage or catastrophic failure.

Asterisk (*) areas on this chart indicate ratings that are limited by strength of material or factors other than stability (tipping).

„RADIUS IN FEET“ is the horizontal distance at ground level from the crane centerline of rotation to a vertical line through the center of gravity of the suspended load.

When using the main boom fall with jib in place, the main fall ratings must be reduced by the jib effective weight shown on the jib rating chart plus twice the weight of all suspended blocks, slings, rope, etc., at the jib fall. See Appendix A.

When using the main boom fall with boom tip extension in place, the main fall ratings must be reduced by the weight of the boom tip extension plus twice the weight of all suspended blocks, slings, rope, etc., at the boom tip extension fall. See Appendix A.

Blocks, slings, buckets and other load carrying devices are considered part of the load. The weight of standard hoisting ropes for the rating at a given radius has been calculated as part of the boom point load and need not be considered in determining net allowable loads. See Appendix A.

This chart was developed exclusively for use with a boom only. Under no circumstances are these ratings to be interpreted for use with a jib.

Ratings shown on this chart make no allowance for such factors as out of plumb loads, wind, poor soil conditions, improper inflation of rubber tires and dynamic effects due to excessive operating speeds. The user (operator) must exercise judgment to make allowance for these conditions. See page 3499 of Operator's Manual for detailed information.

No account is taken of the wind force on the load. The user must consider this effect, which can be substantial for loads with large surface areas. In any wind it is strongly recommended that taglines be used to control the load.

BOOM HOIST LINE – 12 parts of 3/4 inch diameter IPS wire rope with a minimum breaking strength of 51,200 pounds.

PENDANT SUSPENSION LINE – 2 parts of 1-3/8 inch diameter EEIPS wire rope with a minimum breaking strength of 211,000 pounds.

MAIN LOAD LINE – 1.000 inch diameter EIPS wire rope with a minimum breaking strength of 103,400 pounds or 0.875 inch diameter EIPS wire rope with a minimum breaking strength of 79,600 pounds.

SIDEFAME POSITION DEFINITIONS

These ratings are valid for the sideframe positions as indicated below.

Refer to the HC 110 Operator's Manual for additional information.

ERECTION

Erection „OVER-THE-END BLOCKED“ is with the boom over the idler end with idler tumbler blocked (See HC 110 Operator's Manual for blocking instructions). Erection „OVER-THE-SIDE“ is with the boom 90° to the sideframes. Blocks, slings and other load carrying devices must be on the ground during erection.

NOTES TO LIFTING CAPACITY

HC 110

Warning

This rating chart is invalid if the crane has been modified or altered by use of other than GENUINE AMERICAN PARTS as such modifications or alterations may affect its capacity or safe operation. See American Crane Corporation Service Bulletin #259.

Ratings in this chart are in POUNDS and do not exceed the percentage of tipping specified for this crane by ANSI B30.5. All ratings require that the crane be standing level on a firm uniformly supporting surface.

Do not lift loads in excess of those shown on this chart. Lifting loads in excess of those shown or operation not in accordance with good operating practice, including limitations shown on page 3499 of Operator's Manual, can cause tipping, structural damage or catastrophic failure.

Asterisk (*) areas on this chart indicate ratings that are limited by strength of material or factors other than stability (tipping).

„RADIUS IN FEET“ is the horizontal distance at ground level from the crane centerline of rotation to a vertical line through the center of gravity of the suspended load.

When using the main boom fall with jib in place, the main fall ratings must be reduced by the jib effective weight shown on the jib rating chart plus twice the weight of all suspended blocks, slings, rope, etc., at the jib fall. See Appendix A.

When using the main boom fall with boom tip extension in place, the main fall ratings must be reduced by the weight of the boom tip extension plus twice the weight of all suspended blocks, slings, rope, etc., at the boom tip extension fall. See Appendix A.

Blocks, slings, buckets and other load carrying devices are considered part of the load. The weight of standard hoisting ropes for the rating at a given radius has been calculated as part of the boom point load and need not be considered in determining net allowable loads. See Appendix A.

Ratings shown on this chart make no allowance for such factors as out of plumb loads, wind, poor soil conditions, improper inflation of rubber tires and dynamic effects due to excessive operating speeds. The user (operator) must exercise judgment to make allowance for these conditions. See page 3499 of Operator's Manual for detailed information.

No account is taken of the wind force on the load. This effect, which can be substantial for loads with large surface areas, must be considered by the user. In any wind it is strongly recommended that taglines be used to control the load.

BOOM HOIST LINE – 12 parts of 3/4 inch diameter IPS wire rope with a minimum breaking strength of 51,200 pounds.

PENDANT SUSPENSION LINE – 2 parts of 1-3/8 inch diameter EEIPS wire rope with a minimum breaking strength of 211,000 pounds.

JIB BACKSTAY AND FRONTSTAY LINES – 2 parts of 0.875 inch diameter IPS wire rope with a minimum breaking strength of 69,200 pounds.

JIB WHIP LINE – 7/8 inch diameter EIPS wire rope with a minimum breaking strength of 79,600 pounds.

SIDEFAME POSITION DEFINITIONS

These ratings are valid for the sideframe positions as indicated below. Refer to the HC 110 Operator's Manual for additional information.

ERECTION

Erection „OVER-THE-END BLOCKED“

is with the boom over the idler end with idler tumblers blocked (See HC 110 Operator's Manual for blocking instructions). Erection „OVER-THE-SIDE“ is with the boom 90° to the sideframes. Blocks, slings and other load carrying devices must be on the ground during erection.

Hydraulic Crawler Crane

Maximum lifting capacity

110 tons (100 mt).

Boom systems

59HI Tubular Chord Boom, pin connected – with 4 Sheave Tip

- 230 ft maximum boom length.
- 270 ft maximum boom and jib combination length.
- 25 ft (7.6 m) inner and 25 ft (7.6 m) outer and 10 ft / 20 ft / 40 ft available inserts provide boom compositions in 10 ft (3 m) increments from 50 ft (15.2 m) to 230 ft (70 m).

Robust engine

- Cummins Model QSB 6.7 Turbocharged, after cooler, diesel engine, 4 cycle, 6 cylinders, direct fuel injection, 409 cubic inch displacement, 6.7 liters, 240 BHP@2000 rpm, 105 gallons fuel tank capacity.

Environmental operator's cab

- Designed to provide excellent viewing range and quiet, comfortable operation.
- 37 inch (0.91 m) wide cab has wide curved windows on both top and bottom.
- Easy-to-operate modular and ergonomically designed controls reduce operator fatigue and increase productivity.
- Load Moment Indicator with interactive screen. Operator can select from three display modes: loaded condition diagram, rated lifting curve or rated lifting load table.
- Adjustable operator's seat, radio, air conditioner, overhead window, sun visor, fan, overhead and front wipers and drum rotation indicators are standard.

Heavy duty carbody and crawlers

- Fabricated steel carbody is deep box constructed with square axles for the crawler side frames. Precision machined top supports anti-friction swing circle and multiple pass hydraulic swivel joint.
- Crawlers have high alloy steel tumbler yokes and rigid fabricated structures with sealed rollers.
- 36" (914 mm) crawler shoes.
- Travel mechanism is set within shoe width.
- Side frames extended or retracted by cylinders inside the carbody.
- Two travel speed settings – 0.60 / 0.87 mph (0.96 / 1.4 km/h).
- 30 % (17°) gradeability.

Powerful, high-speed hoist system

- Independent main and auxiliary load hoisting drums. Main drum is grooved for 1 inch (25 mm) diameter rope. Max line speed is 513 fpm (156 m/min), max single line pull is 40,640 lb (18 435 kg). Rated single line pull is 29,500 lb (13 381 kg). Auxiliary drum is grooved for 7/8 inch (22.4 mm) diameter rope. Max line speed is 553 fpm (168 m/min), max single line pull is 37,670 lb (17 086 kg). Rated single line pull is 22,700 lb (10 297 kg). Freefall on main and auxiliary drums.
- Each drum, including optional third, has power up/down and freefall. Load hoists are further controllable in stepless mode.
- Ample work space in front of the drums allows easy access for cable installation and maintenance.
- External contracting brake.
- Internal expanding band clutch.
- 3.0 rpm swing speed.

High capacity, dependable hydraulic system

- Open circuit system has 2 variable displacement piston pumps with system capacity of 183 gpm (692 lpm).
- Hydraulic reservoir with 79 gallons (300 l) capacity and 10 micron filtration.
- Component working range is between -4 and 203° F (-20 and 95° C).

Four piece removable counterweight

- Four piece pin connected counterweight can be assembled or disassembled easily within minutes.
- Hydraulic counterweight removal system is standard and makes the HC 110 one of the most transportable cranes in its class.
- Moves on five trucks with full boom and #9HL jib. At 17 ft, 0.5 inch (5.2 m) wide and 11 ft (3.35 m) high, the basic HC 110 will transport on a standard lowboy trailer.

Options include

- Third drum
- Third drum with free spooling
- Automotive type lights
- Hydraulic power take off
- Jib and jib inserts
- Single sheave extension
- Transportation package
- Single sheave extension
- Tagline winder

TRANSPORT EXAMPLE FOR HC 110

HC 110

With 200 ft 59”H Boom & 70 ft Jib and 3rd Drum

Loads required as follows (weights shown do not include blocking or tie-down material):

LOAD NO. 1 – Step Deck

2 x crawler side frame counterweights (11,500 each)	23,000 lbs
40' boom center section with pendants	2,670 lbs
20 ft jib inner	890 lbs
1 x upper counterweight	4,400 lbs
TOTAL LOAD	30,960 lbs

LOAD NO. 2 – Step Deck

Middle portion of counterweight	12,100 lbs
40' boom center section	2,670 lbs
20 ft jib outer	480 lbs
1 x upper counterweight	4,400 lbs
TOTAL LOAD	19,650 lbs

LOAD NO. 3 – Step Deck

Lower portion of counterweight	32,000 lbs
25 ft boom outer section	4,200 lbs
20' boom center section	1,975 lbs
Main load block	1,500 lbs
Overhaul ball	650 lbs
TOTAL LOAD	40,325 lbs

LOAD NO. 4 – Step Deck

1 x 10' boom center section	1,060 lbs
1 x 40' boom center sections	2,670 lbs
10' jib center section	190 lbs
20' jib center section	385 lbs
TOTAL LOAD	4,305 lbs

LOAD NO. 5

Basic Crane:

- a) Complete upper structure
- b) Carbody and sideframes
- c) Retractable A-frame
- d) Boom inner section and boom stops
- e) Third drum

TOTAL WEIGHT OF BASIC CRANE, etc.)	105,000 lbs
