Load Chart US Standard

Load radius is the horizontal distance from the center of rotation of the unloaded crane to the vertical load line with the load applied.

Load hooks, downhaul weights, hook blocks, and other load handling devices except hoist rope shall be considered part of the load.

Pick and carry with the shortest practical boom, centered over the front. Operate with the boom as low as possible, with the load close to the ground. Pick and carry capacities are for smooth, level paved surface.

Deck load 6000 lbs max, centered between wheels, with no boom load. Deck loads must be centered behind the front axle. Speed must be less than 2 mph. Maximum travel 200 ft. In 30 minutes.
