Concept and characteristics

Dimensions

Standard

** Boom pivot point

* Option: crawler side frames with 4'11" flat track pads

Operating weight

The operating weight includes the basic machine with crawler side frames, winches 1+2 (2x 33,721 lbf) incl. 2 hoist ropes (2x 787 ft) and 66 ft main boom, consisting of A-frame, boom foot (33 ft), boom head (23 ft), boom section (10 ft), 273,373 lbs rear counterweight, 125,663 lbs carbody counterweight and 661,300 lbs pulley block.

Total weight approx. 639,341 lbs

Ground pressure

The actual ground pressure is calculated according to the configuration and position of the machine and displayed in the operator's cabin. Using the optional Liebherr Crane Planner the actual ground pressure can already be calculated and displayed in the planning stage.

Equipment

Main boom (No. 2821.xx)	66-302 ft
Fixed jib (No. 0906.21)	23 ft
Fixed jib (No. 1507.20)	26 ft
Fixed jib (No. 1008.xx)	36-85 ft
Fixed jib (No. 1713.xx)	46-115 ft
Luffing jib (No. 1916.xx)	66-312 ft
Max. boom combination (main boom 213 ft + luffing jib 312 ft)	525 ft
Luffing jib (No. 2316.xx)	66-370 ft
Max. boom combination (main boom 184 ft + luffing jib 370 ft)	554 ft
Auxiliary jib for main boom (No. 2821.xx)	79,370 lbs
Auxiliary jib for luffing jib (No. 1916.xx)	33,070 lbs
Auxiliary jib for luffing jib (No. 2316.xx)	66,140/99,210 lbs

Remarks

- The lifting capacities stated are valid for lifting operation only (corresponding with crane classification according to ISO 4301-1, crane group A1).
- Crane standing on firm, horizontal ground.
- The weight of the lifting device (pulley block, hoist ropes, shackle etc.) must be deducted from the gross lifting capacity to obtain a net lifting value.
- Additional equipment on boom (e.g. platforms) must be deducted from the load capacity.
- The max. admissible wind speed can be preselected in the LML software and is shown in the load chart.
- Working radii are measured from centre of swing and under load.
- The lifting capacities are valid for 360 degrees of swing.
- Calculation of stability under load is based on ANSI/ASME B 30.5 load ratings as well as ISO 4305 Table 2 and tested according to SAE J765 and SAE J987.
- Weights may vary depending on the delivered configuration of the machine, filling level of the tanks as well as generally valid tolerances.
- The figures in this brochure may include options which are not within the standard scope of supply of the machine.

Technical description

Diesel engine

Power rating according to ISO 9249, 390 kW (523 hp) at 1700 rpm
Engine type ————— Liebherr D 946 A7-04
Fuel tank ————— 198 gal capacity with continuous level indicator and reserve warning
Engine complies with NRMM exhaust certification EPACARB Tier 4f and 97/68 EC Stage IV.

Hydraulic system

A double axial displacement pump supplies the main boom and luffing jib winch and the crawlers in open circuits. Winches 1 + 2 and the swing gear work in closed circuits. All movements can be performed simultaneously. To minimize peak pressure an automatic working pressure cut-off is integrated in the pump. All filters are electronically monitored. The use of synthetic environmentally friendly oil is also possible. Furthermore, an emergency operation mode is installed.

Working pressure ————— max. 5,076 PSI
Hydraulic oil tank capacity — 172 gal

Luffing jib winch

Line pull ————— max. 31,024 lbf
Rope diameter ————— 20 mm
Jib luffing ————— 69 sec. from 15° to 78°

Boom winch

Line pull ————— max. 40,466 lbf
Rope diameter ————— 24 mm
Boom up ————— 127 sec. from 15° to 86°

Crawlers

Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, crawler tracks, hydraulic chain tensioning device.

Flat track pads ————— 3'11" (option 4'11")
Drive speed ————— 0-0.764 mph

Swing gear

Consists of rollerbearing with external teeth, swing gear with fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion. Both swing modes are possible – speed control or free swing. A multi-disc holding brake acts automatically at zero swing motion.
Swing speed from 0-1.8 rpm continuously variable.

Hoisting gear

Standard crane winches 1 + 2
Line pull in the 1st layer ————— max. 48,334 lbf
Line pull in the 7th layer ————— 33,721 lbf
Rope diameter ————— 28 mm
Drum diameter ————— 2.4 ft
Rope speed ————— 0-372 ft/min
Rope capacity in 7 layers ————— 1870 ft

The winches are outstanding in their compact design and easy assembly. Propulsion is via a planetary gearbox in an oil bath. Load support by the hydraulic system; additional safety factor by a spring-loaded, multi-disc holding brake. The main winches use pressure controlled, variable flow hydraulic motors. This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.

Optional free-fall winches:

Line pull in the 1st layer (crane operation) ————— max. 42,714 lbf
Line pull in the 7th layer (crane operation) ————— 29,225 lbf
Line pull in the 1st layer (free-fall operation) ————— max. 38,218 lbf
Line pull in the 7th layer (free-fall operation) ————— 26,527 lbf
Rope diameter ————— 28 mm
Drum diameter ————— 2.4 ft
Rope speed ————— 0-427 ft/min
Rope capacity in 7 layers ————— 1870 ft

The winches are outstanding in their compact design and easy assembly. Clutch and braking functions on the free-fall system are provided by a compact designed, low wear and maintenance-free multi-disc brake.

Control

The heart of the hydraulic crawler cranes is the Liebherr control system which has been developed and manufactured in-house. It includes all control and monitoring functions and is designed to withstand extreme environmental conditions and heavy duty construction tasks. Complete machine operating data as well as warning signals and irregularities are clearly displayed on the monitor in the operator's cabin in the required language. The electro-hydraulic proportional control allows several movements to be performed simultaneously and precisely. Moreover, the power cut-off depends on the preselected and expected wind speed and the preselected drive speed level. The operating mode "Lifting" is supplied as a standard. As an option operating modes such as grab operation, personnel lifting, foundation work according to EN 16228 (e.g. vibrator and leader operation) and barge charts can be enabled in the software. The display of ground pressure and centre of gravity is another option.

Noise measurement data and vibration

Noise emissions correspond with 2000/14/EC directive.
Emission sound pressure level L_{PA} in the cabin ————— 71.1 dB(A)
Guaranteed sound power level L_{WA} ————— 110 dB(A)
Vibration transmitted to the hand-arm system of the machine operator ————— < 8.20 ft/s²
Vibration transmitted to the whole body of the machine operator ————— < 1.64 ft/s²
